RECEPTION

20.00-22.00

FRIDAY MAY 16, 2014

WHAT DO WE MEAN BY RESILIENCE?

Poor people around the world have been subject to a range of shocks, and future shocks are certain to occur. There are many concepts and definitions of resilience. IFPRI's 2020 policy consultation has resulted in the following definition of resilience: "Building resilience means helping people, communities, countries, and global institutions prevent, anticipate, prepare for, cope with, and recover from shocks and not only bounce back to where they were before the shocks occurred, but become even better-off." This part of the conference program will frame resilience conceptually and look at how it can be used for research and development purposes. It will then look at the changing impacts of shocks alongside other social, demographic, economic, and political shifts.

WHAT IS THE WAY FORWARD?

To effectively build resilience, we will need to identify knowledge gaps and policy priorities. This final part of the conference will look at what we know and what we do not yet know about building resilience for food and nutrition security. It will examine how we can meet these critical gaps in order to scale up successful initiatives, investments, and policies. It will then look forward at what actions each set of actors can take in the short, medium, and long term in order to make possible effective policies and programs that achieve resilience for food and nutrition security for all.
